Education

BSc Computer Science, Universidad Example, Valencia
Sep 2019 - Jun 2023
- Teaching assistant for the databases course: weekly SQL labs for 40 students.

Skills

Python, SQL, PostgreSQL, Pandas, FastAPI, Docker, Git, OpenAI API, pgvector, prompt evaluation

Languages

Spanish (native), English (C1)

Summary

Software engineer with three years of data and backend work, now moving into AI engineering. I build LLM features with agent frameworks and tool calling, measure them on labeled test sets, and serve them through FastAPI.

Experience

AI-focused Software Engineer, Harbor Data Co., Valencia
Feb 2025 - Present
- Built a customer-support assistant with agent frameworks, tool calling and the OpenAI API. First-response time fell by 30%.
- Compared 6 prompt versions on 300 labeled support tickets and raised answer accuracy from 71% to 84%.
- Wrote ETL jobs in Python that load 2 million rows a day into PostgreSQL.
- Rewrote nightly batch joins and added indexes, cutting run time from 5 hours to 80 minutes.
- Containerized three internal services with Docker and exposed them through FastAPI.

Junior Data Engineer, Tidewater Sales Ops, Valencia
Sep 2023 - Jan 2025
- Maintained SQL transformations for a sales warehouse used by 25 analysts.
- Added data quality checks in Python that caught 14 broken loads in the first quarter.
- Ran the weekly data refresh with a cron-based scheduler.

Data Analyst Intern, Kestrel Solar Labs, Valencia
Jun 2023 - Aug 2023
- Built a dashboard of plant output in SQL and Python.
- Presented weekly findings to 12 plant managers.

Projects

Policy Search Prototype (personal project)
- Retrieval prototype over 12,000 policy documents, using embeddings stored in pgvector. Every answer cites its source passage.
- Evaluation set of 50 questions: 46 answered with the right source passage.
